Planning and Related Services

• Planning Division Director's Comments

Planning is the starting point for all projects that ultimately move into design and construction. Products that provide planning solutions, guidance and tools for our planning clients need to provide sound executable recommendations. The wide variety of planning products that can be accomplished through partnership with a consultant need to meet the following two measures:

- Quality of the product
- Adherence to schedule

The quality of the products should be based on planning and engineering expertise in the area being studied. Recommendations need to be based on precepts that ensure the solution can be executed. Adhering to the schedule is key to being able to provide our clients the information they need to make decisions that will impact future funding and execution of facility solutions.

The planning products being produced today include the need to capture and display the solution in an electronic format. The use of the Internet and other technologies is key to providing timely information to the Navy. The creation of electronic tools to support the planning business process is a need expressed by our clients. These non-traditional areas of planning are foundational to the planning solutions of the future.

• Introduction

This section of the AE guide will provide information that will assist consultants in preparing Planning Division deliverables. The information that is available is posted on the Planning Division web page on the Atlantic Division web site. As additional guidance is posted it will be available on that site. Links to the existing information are provided on this page and they will be updated as changes and additions are made.
